JOURNAL OF CRYSTAL GROWTH

www.elsevier.nl/locate/jcrysgro

Subject index

Apparatus
- for the growth of shaped gallium antimonide crystals 1
- for the growth of silicon carbide 308
- for silicon nano particles 466

Computer simulation
- of annealed gallium arsenide 6
- of binding energy 254
- of macromolecular crystal growth 130
- of sublimation 243

Constitutional supercooling
- of indium gallium antimonide 39

Convection 75, 166, 316, 326, 619

Device characterization
- electronic materials 75, 82, 351, 405
- heterojunction 16, 46, 220, 457, 538
- lasers 197, 439
- quantum wells 439
- quantum wires and dots 16, 51, 216, 432

Diffusional control
- of ammonium chloride 326
- of beryllium 46
- of directional adatoms 364
- of titanium carbide 296

Diodes, see Device characterization

Electronic materials, see Device characterization

Epitaxy, see Thin film growth

Etching
- chemical 39, 56, 522

Heat flow control
- of annealed gallium arsenide 6
- of Bridgman method 619
- of macromolecular crystal growth 130

Heterojunctions, see Device characterization

Hydrodynamics, see Convection

Kinetics
- of growth 75, 135, 161, 296, 449, 461, 471, 610, 631
- of interface control 100, 180
- of nucleation 296, 531
- of self assembled quantum dots 286

Lasers, see Device characterization

Lasers, crystals for
- calcium gadolinium oxoborate 114
- calcium lithium niobium gallium garnet 121
- calcium yttrium oxoborate 114
- yttrium vanadate 543

Melt growth technique
- by Czochralski method
- - of aluminum tungstate 176
- - of calcium gadolinium oxoborate 114
- - of calcium yttrium oxoborate 114
- - of indium gallium antimonide 39
- - of gallium oxide 510
- - of lanthanum gallium oxide 275
- - theory of shaped growth 301
- by edged defined film fed growth
- - of shaped gallium antimonide crystals 1
- by floating zone method
- - of lanthanum manganese oxide 480
- - of yttrium vanadate 543

Microgravity, growth under
- of zeolite 140, 150

Morphological stability
- of cupler 592
- of growing surface 631

Nucleation
- of calcium sulfate dihydrate 579
- of gibbsite 572
- of nickel silicon 488
- of zeolite 140, 150

Numbers
- Grashof 166
- Peclet 166
- Rayleigh 326, 619
- Schmidt 166

Phase diagram
- of III–V surface reconstruction 384
- of cadmium telluride 444
- of carbon tetrachloride 161
- of indium gallium arsenide system 413
- of lead magnesium strontium sulfate 126

Quantum structures, see Device characterization
Quantum wells, see Device characterization
Quantum wires and dots, see Device characterization

Solid growth technique
- by arc discharge
- - of gallium oxide 494
- by sol gel
- - of lanthanum nickel oxide 100
- - of lead zirconate titanate 82
- by solid phase intergrowth
- - of zirconia 515
- - of zinc oxide 515
Solution growth technique
- by flux
- - of lithium cupric vanadate 345
- by hydrothermal 140, 150
- by top seeded solution
- - of mixed niobate borate 263
- - theory of chemical solution transport 231
- by low temperature method
- - of gallium arsenide 351
- - of L-arginine phosphate monohydrate 291
Superconductivity materials, high Tc
- - of BSCCO 68
Surface energy, determination
- of high polar energy surface 180
Surface structure
- of 1,4-bis(5-phenyloxazol-2-yl)benzene 88
- of aluminum gallium arsenide antimonide
- of macromolecular crystal growth 130

Thin film growth, epitaxy
- by atomic layer epitaxy
- - of hafnium dioxide 105
- - of gallium arsenide 351
- - of titanium dioxide 531
- by liquid phase epitaxy
- - of indium gallium arsenide 413
- - of silicon carbide 75
- by metalorganic molecular beam epitaxy
- - of aluminum gallium indium phosphide 226
- by molecular beam epitaxy
- - of 1,4-bis(5-phenyloxazol-2-yl)benzene 88
- - of aluminum gallium nitride 432
- - of aluminum gallium indium nitride 341
- - of aluminum antimonide 384
- - of bismuth strontium calcium cuprate 68
- - of gallium arsenide 23, 355
- - of gallium antimonide 384
- - of gallium nitride 204, 341, 379, 432
- - of indium arsenide 16, 216, 384
- - of indium aluminum arsenide 51, 216
- - of indium gallium arsenide 16
- - of indium gallium nitride 401
- - of silicon 457
- - of silicon carbide 204
- - of silicon germanium 457
- - of zinc selenide 548
- by gas source molecular beam epitaxy
- - of indium gallium arsenide 46
- - of indium phosphide 46
- by pulsed laser deposition
- - of cadmium sulfide 554
- by vapor phase epitaxy
- - through chemical vapor deposition
- - - of gallium aluminum arsenide 56
- - - of lithium niobate tantalate 336
- - - of silicon 461
- - - of silicon dioxide 449
- - - of silicon carbide 560
- - - theory of simultaneous etching and growth 98
- - through ion beam
- - - of yttria 501
- - through metalorganic chemical vapor deposition
- - - of aluminum indium arsenide 393
- - - of aluminum gallium nitride 62
- - - of cadmium selenide 286
- - - of gallium arsenide 364, 425, 538
- - - of gallium phosphide 538
- - - of gallium nitride 235, 405
- - - of indium arsenide 425
- - - of indium gallium aluminum phosphide 538
- - - of indium phosphide 471
- - - of indium gallium arsenide
- - - of indium gallium nitride 197
- - - of indium nitride 185, 191
- - - of tantalum nitride 604
- - - of zinc sulfide 209
- - - of zinc magnesium sulfide 209
- - through pulsed laser deposition
- - - of zinc oxide 281

Vapor growth technique
- by evaporation and condensation
- - of cadmium telluride 30
- - of fulleren single crystals 96
- by sublimation
- - of aluminum nitride 243
